

**The Passivhaus
Student Competition
is back, bigger and
better!**

PASSIVHAUS
Student Competition

The competition's key objective is to give architecture & built environment students a creative vehicle to learn about Passivhaus principles and material choices.

The competition will form part of the students' ongoing course work; Competitors are asked to identify one UK retrofit or new build project and provide detailed design to turn this into a certifiable Passivhaus building.

One winner will be chosen from each University. Winners will be announced in Summer 2017, with the awards ceremony taking place at the following UK Passivhaus Conference.

Tarmac are delighted to be main sponsors of the second Passivhaus Student Competition organised by the Passivhaus Trust. Working with talented young architecture, engineering & planning students is key to supporting their development, and unlocking creative design ideas that place whole life sustainability at the forefront. The products and solutions we create play a fundamental role in creating a more sustainable built environment and sustainable communities so we are looking forward to seeing what design ideas the students will produce.
